

SEPIDEH NILFOROUSHAN

FRONT-END DEVELOPER

ABOUT ME

Front-end engineer with 3 years of experience developing scalable and performant web applications using React, Next.js, Redux, and TypeScript. Strong background in responsive UI development, RESTful API integration, and code quality through version control and structured architecture. Focused on building efficient, user-friendly interfaces while optimizing performance and maintainability. Continuously improving technical expertise and staying aligned with modern development standards.

TECHNICAL SKILLS

React & Libraries:

- React
- Nextjs
- Typescript
- docker
- Redux, Zustand
- Material-UI, Styled-Components
- React Hook Form, Formik
- TanStack Query

JavaScript & TypeScript:

- ES6, Async Programming, OOP in JS
- Pure JS SPA, Templating, DOM Manipulation
- TypeScript: Interfaces, Types, Generics, Type Inference, Type Narrowing, Union/Intersection Types,

HTML & CSS:

- SCSS
- Bootstrap, Tailwind

EDUCATION

University of Kashan, Iran

Sep 2017 - May 2021

- Bachelor of Electrical Engineering

WORK EXPERIENCE

Front-End Developer – Adanic (Aug 2024 – Aug 2026)

- Developed front-end features for enterprise banking and insurance platforms (3M+ users) using React, Next.js, and TypeScript.
- Improved load time by 35% through route-based code splitting and lazy loading with next/dynamic.
- Implemented server-side rendering (SSR) to enhance performance and SEO.
- Designed and implemented a CAPTCHA-based SMS flow, reducing abusive requests by 90% and boosting system efficiency by 40%.
- Collaborated with product managers and backend developers in agile (Scrum) environments.
- Built and maintained whitelist configuration features for secure, domain-specific deployments across multiple banks.

Front-End Developer – RayDana (Jun 2023 – Aug 2024)

- Developed and maintained enterprise web applications using React, TypeScript, and nextjs.
- Built reusable and responsive UI components and integrated RESTful APIs.
- Collaborated with backend developers to implement business requirements and deliver new features.
- Improved application performance, usability, and maintainability while resolving bugs and technical issues.

PROJECTS

Ventura

- Ventura is a modern camping and outdoor gear storefront built for trail-ready shopping. Visitors can explore curated products by category, browse featured picks and timed deals, and enjoy a clean, responsive experience that feels premium from first scroll to checkout intent.
- Led the frontend build end to end – layout system, product discovery UI, featured deals, and motion details – using Next.js, React, TypeScript, and Tailwind CSS, with Zustand for client state and Prisma for product data.

FlowBoard

- Designed a multi-user data model (projects, tasks, clients, invoices, activity) with server-side userId ownership so users never see another account's data.
- Implemented email/password auth with Auth.js (JWT sessions), bcrypt hashing, protected routes, and email-based password reset.
- Built full CRUD for projects, tasks, clients, and invoices using Next.js Server Actions, Prisma, and Zod + React Hook Form validation.
- Added a live metrics dashboard and analytics charts (Recharts) fed from PostgreSQL, plus demo data seeding on signup.

Weather Forecast

- This website is a weather forecasting platform that allows users to register, and search for weather information for specific countries, it leverages Javascript, tailwind CSS, animations, and a Rest API to fetch weather data
